PROFESSIONAL SUMMARY

Software engineer with a CS/Data Analytics background and production experience building and maintaining Python services: a FastAPI middleware serving thousands of users with idempotent, retry-safe request handling, PostgreSQL-backed session state, and a 79+ test automated suite via CI/CD. Strong fundamentals in operating systems, networking, and data structures; comfortable debugging across the stack and owning well-defined components of large-scale systems.

EXPERIENCE

Co-Founder

August 2026 – Present

Rivetfields (rivetfields.com)

- Co-founded a startup building infrastructure for long-horizon RL agent training and evaluation: benchmark datasets distilled from frontier models, end-to-end simulation environments, and private inference running on the customer's own cloud.
- Built a working prototype data harness for Day of AI's pilot: natural-language analytics over social posts and program data with source-linked answers, reusable workflows, and scheduled reporting.

Learning Software Engineering Intern

July 2025 – May 2026

MIT RAISE / Day of AI

- Designed, deployed, and maintained a production AI data pipeline (Python/FastAPI) integrating the Meta Cloud API with entity-level parsing, retry handling, and idempotent deduplication, serving thousands of registered users.
- Built multi-user session state management with PostgreSQL-backed persistence and Alembic migrations; maintained an automated test suite of 79+ tests via CI/CD on GitHub Actions.
- Rebuilt Teachable Machine as an offline-capable Progressive Web App with TensorFlow.js for browser-side ML inference; deployed to 150+ teachers in Rwanda, enabling ML access in low-connectivity environments.

Software Engineering Intern

May 2024 – August 2024

Center for Applied Technology Lab (CATLAB)

- Built a full-stack analytics dashboard with time-series data ingestion, role-based access control, and tiered authentication, giving 1,580+ campus users real-time visibility into attendance standing.
- Developed a production React/TypeScript web application with virtualized rendering, debounced search, and a Node.js API layer, adopted by Westmont faculty and students for daily directory access.

PROJECTS

MirrorMe

March 2026 – May 2026

Python, FastAPI, React, SQLite, ChromaDB

- Built a local-first agentic system with ChromaDB retrieval; the agent parses structured action tags to trigger automated task creation with zero cloud dependency.

Playlab WhatsApp Bridge

January 2026 – March 2026

FastAPI, Meta Cloud API, PostgreSQL, Alembic

- Designed and deployed production FastAPI middleware integrating the Meta Cloud API with Claude AI for natural language processing; adopted by Ghana and Rwanda's national AI literacy program, reaching 5,000+ teachers.
- Built multi-user session state management with PostgreSQL-backed persistence and Alembic migrations; automated retries and idempotent request handling for reliable low-bandwidth deployments.

SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL

Backend & Data: FastAPI, Node.js, REST API design, PostgreSQL, SQLAlchemy, Alembic, Redis, pytest

Tooling: Docker, Git, GitHub Actions (CI/CD), shell scripting

Systems: Linux, TCP/IP, DNS, operating systems fundamentals, data structures & algorithms, object-oriented design

Frontend: React, TypeScript, Progressive Web Apps (PWA)

LEADERSHIP

- LeFrak Scholar | Bridge2Rwanda Scholar | Founder, Ganza Mwari Initiative (Rwanda)

EDUCATION

Westmont College

Santa Barbara, CA

B.S. Data Analytics; B.A. Computer Science.

August 2026

Relevant Coursework: Operating Systems, Database Systems, Data Structures & Algorithms, Programming Languages, Linear Algebra
